Wircom

Wircom's data center and over 120 telecom towers distribute data and provide steady internet access for over 60,000 people in Slovakia.

www.wircom.sk

blizzard-proof security for telecom towers.

Background

Wircom has a strong position in the regional telecom market of Slovakia. Their network provides a steady internet access for over 60,000 people living in the Topolčany area. Wircom utilises a modern data center as well as over 120 telecom towers to distribute data. To both secure the distribution assets and provide access for maintenance, multiple locking points have to be secured and access rights carefully planned.

Solution

Wircom now uses the mechanical ABLOY PROTEC2 and electromechanical PROTEC2 CLIQ locks to secure assets, doors, gates, and cabinets. The CLIQ system is installed in the data center and super weather-proof padlocks are in use at tens of telecom towers. All of these products fit into one master key system. Each employee has their own key and personalized access rights. If a key is lost, it can be marked as lost and its access rights revalidated, reducing the need to rekey locks.

The products meet all regional and industry security and access management requirements. Wircom's people and assets are safe and secure under all circumstances. For example, all security products used at the telecom towers are built to last heavy weather from blizzards to storms.

ABLOY solution

- PROTEC² CLIQ
- CLIQ Web Manager
- Super weather proof padlock

Benefits

A single master key opens all required doors, while the keys lower in the hierarchy open only specific locks

- Hence, multiple locks can be opened with less keys.
- Personalized access rights that correspond to the employees' position
- Access rights of lost keys will not be revalidated
- Durable padlocks for outdoors – a reliable mechanical or electromechanical solution
- Simplified key management

“We had padlocks from a different provider, that would sometimes break because of the harsh weather conditions. After switching to ABLOY products, we have not experienced such problems. With heavy-duty locks we can also guarantee any passer-by will steer away from harming or climbing our towers. This way we can keep our employees as well as other people safe.”

Ondrej Kučera,
CEO of Wircom
